**REMESTEMCEL-L IMPROVES RESPIRATORY AND FUNCTIONAL OUTCOMES IN PATIENTS WITH INFLAMMATORY LUNG DISEASE**
*Phase 2 Trial Results Presented At 2020 International Society for Cell & Gene Therapy Annual Meeting*

**Melbourne, Australia; June 1, 2020 and New York, USA; May 31, 2020:** Mesoblast Limited (ASX:MSB; Nasdaq:MESO), global leader in allogeneic cellular medicines for inflammatory diseases, today announced that treatment with its lead mesenchymal stem cell (MSC) product candidate remestemcel-L in patients with chronic obstructive pulmonary disease (COPD) and an elevated state of inflammation resulted in improved respiratory and functional outcomes. The results were presented as a virtual oral presentation delivered to the 2020 International Society for Cell & Gene Therapy (ISCT) annual meeting held May 28-29, 2020.

The post-hoc analysis from a randomized, placebo-controlled 60-patient Phase 2 trial in patients with COPD showed that remestemcel-L, given in four monthly intravenous doses of 100 million cells, significantly improved respiratory and functional clinical outcomes in patients with elevated levels of the inflammatory biomarker C-reactive protein (CRP). Significantly elevated CRP levels are predictive of increased hospitalization and death in patients with COPD<sup>1</sup>, and are seen in various acute lung diseases, including acute respiratory distress syndrome (ARDS), a life-threatening complication of COVID-19. These results support potential of remestemcel-L to effectively treat inflammatory lung diseases, such as acutely decompensated COPD and ARDS.

Key findings were:

- The greater the degree of inflammation, as measured by elevated CRP levels, the greater the signal of efficacy of remestemcel-L treatment in improving moderate to severe lung disease
- Significant improvements were observed in each of the pre-specified endpoints tested, forced expiratory volume, forced vital capacity, and the distance walked in the six-minute walk test (all p <0.01), with maximal effects on all parameters seen at four months
- In patients with the highest level of CRP (>4mg/L), those who received remestemcel-L were able to walk 55 meters further than placebo-treated patients in the six-minute walk test at four months (p=0.004); the six-minute walk test is a major independent predictor of mortality in COPD<sup>2</sup>
- The dose administered was well tolerated with no infusion-related toxicity and no identified safety concerns.

Mesoblast Chief Medical Officer Dr Fred Grossman said: “The correlation between highest CRP levels and greatest degree of response to remestemcel-L suggests that the inflammatory component of the lung disease may trigger and be amenable to the immunomodulatory effects of treatment with remestemcel-L in patients with acute inflammatory conditions. Since recurrent hospitalization rates and mortality in COPD are associated with both high levels of CRP and progressive decline in the six-minute walk test, these results suggest that remestemcel-L could provide longer-term benefits for COPD patients with high levels of inflammation. They also provide a compelling rationale for the evaluation of remestemcel-L in the current United States Phase 3 randomized controlled trial of 300 patients with moderate to severe COVID-19 ARDS.”
